Bulrush Horticulture is committed to finding alternatives to peat, such as Forest Gold Plus (FGP) which has been in development since 1992.

What is Forest Gold Plus?

FGP is a sustainable, timber derived product originating from woodchips from sustainably managed forests.

FGP is specially impregnated with nutrients to provide a slow release fertiliser source to all crops for healthy root development and superior plant growth.

Apart from acting a peat alternative the inclusion of FGP also improves growing performance to deliver healthier plants.

In extensive trials we have found that plants perform better in FG+ mixes than in conventional peat mixes.

The Plant on the left shows superior root growth when used with Forest Gold Plus

Forest Gold Plus

What are the benefits of FGP?

Apart from acting as a peat dilutant the inclusion of FGP has a number of major benefits:-

1. Superior root growth

FGP improves the physical structure of the substrate promoting faster root growth and plant establishment and allowing better water absorption.

2. Bigger, healthier plants

Independent trials FG+ mixes performed better than conventional 100% peat mixes, growing bigger, healthier plants due to better physical structure and levels of nutrition.

3. Improved water holding capacity

The addition of FGP creates a much improved water holding capacity in the substrate and allows for greater nutrient levels to be incorporated, extending the period before supplementary feeding is needed.

4. Sustainability

FGP is a timber derived product sourced from sustainably managed forests.

5. Lightweight

FGP is lighter than peat, making FGP bagged products lighter to carry and also reducing energy consumption during transport.

Standard Product Mixes

The tried and tested development of Forest Gold Plus now means that as a standard we incorporate Forest Gold Plus at a minimum of 20% in all the following mixes:

ForestGold

BEDDING SUBSTRATE complete with 30% Forest Gold Plus and Wetter

Excellent for packs and small pots.

Our bedding mix is free flowing and ideal for use with tray filling and transplanting equipment. A medium feed level has been incorporated to establish even growth. Liquid feeding techniques are the favoured method to sustain longer cropping programs.

CODE	BAG SIZE	PALLET QTY
106.720/045	80 Litres	45 Bags

Available by pallet quantity only

POT PLANT SUBSTRATE complete with 30% Forest Gold Plus and Wetter

Developed for 9cm and 13cm pot plant production.

The open structure of this substrate is particularly well suited to both flood bench and overhead irrigation methods. Accurate feed levels encourage even rooting and strong top growth.

MULTIPURPOSE COMPOST complete with Forest Gold

Use for general gardening jobs all around the garden to achieve unrivalled results.

Our new multi-purpose compost is enhanced with the innovative ingredient Forest Gold Plus combined with essential nutrients and trace elements, to create one premium product. The compost formulation delivers superior plant growth, healthier plants and improved water holding capacity.
